

If you're a homeowner

- Create a **fire-safe zone**: Maintain at least a 30-metre clear area around your home to slow the spread of fire.
- **Remove the crowns of trees** within at least 3 metres of the façade.
- **Prune trees** up to a height of 3 metres.
- **Space tree crowns** with at least 3 meters of separation between trees.
- **Clear the underbrush** keeping no more than 30%.

Forest areas

With everyone's collaboration, we build informed, prepared, and safer communities, while also promoting landscapes that are resilient to wildfires.

This summer

Surround yourself with safety!

Prevention is action

TRAMUNTANAXXI

Living near a forest carries a significant responsibility, as the risk of wildfires can threaten your safety. By implementing **prevention and mitigation measures, you can reduce the vulnerability of your home to wildfire hazards** and transform it into a defensible space that offers firefighters better opportunities to control the flames.

If you are a farmer or the owner of a property or home located in a forested area, there are a wide range of **strategies available to help minimize your home's exposure**, including creating a safety zone that eliminates the vertical and horizontal continuity of flammable and combustible materials.

If you're a farmer:

- **Use your tractor to create firebreaks** by ploughing around the perimeter of your farm or cultivation areas.
- **Isolate your farmland** from surrounding vegetation to reduce fire risk.
- **Establish barriers** to protect your crops and property from potential wildfires.

You know your land better than anyone — **put your livestock to work** in protecting it:

- **Use livestock to maintain firebreaks and fire protection strips,**
- **Reduce grass and flammable materials** around farm buildings, especially near homes, and stables.
- **Grazing animals helps control flammable reed vegetation** near forested areas.

Low-relief area

If you're a landowner:

- **Plough or clear the terraces** near the forest area.
- **Create areas of discontinuity** to prevent the fire crossing your land.
- **Cut grass in the terraces** to prevent fire spread.

Terraced areas
